Lifelong Housing Certified Homes

Where can I see a Lifelong Housing Certified home?

There are currently 5 new homes in the Twin Creeks development in Central Point certified to the Lifelong Housing standard. A sixth home is under construction. An additional 19 two bedroom, two bath “cottages” will be built adjacent to the Twin Creeks Retirement Community and will be Lifelong Housing certified.

What do these homes look like?

From the outside the homes look just like every other home in the community except they have no step entries. The interiors feature spacious open concept floor plans and look just like any other new home but with wider doors and hallways, levered door handles throughout and wheelchair accessible electrical outlets and controls (thermostats, light switches).

How big are the new certified homes?

The homes range in size from 1,650 square feet to 2,265 square feet and are all single story with three bedrooms, two baths and two car garages.
